

# Today's engines are more demanding than ever. Can your bearings handle it?

King's superior materials and construction meet or exceed the toughest demands of all market segments: automotive, heavy duty, industrial, aviation, marine, and high performance.

Specialists at King Engine Bearings developed an advanced polymer coating range to address market needs.

King coating solutions enhance seizure resistance and provide with extra lubrication which protects the engine during metal to metal contact and oil starvation.

In the range: MC bi-metal coated for start stop and hybrid engines, XPC coated for superior wear resistance, TFC for TOP FUEL and PRO MOD, and GPC for diesel performance and extremely high load engines.

	<p><b>AM</b> Standard aluminum based material, equivalent to SAE-783, for low and medium load engines.</p> <p>Load Capacity: </p> <p>Anti Seizure: </p> <p>Wear Resistance: </p> <p>Conformability/Embedability: </p>	<p>Aluminum Bearing Alloy Aluminum bonding layer Steel Back</p>		<p><b>SX/XA</b> Strengthened copper based material, with higher tin content, for medium and high load engines.</p> <p>Load Capacity: </p> <p>Anti Seizure: </p> <p>Wear Resistance: </p> <p>Conformability/Embedability: </p>	<p>Babbitt overlay Nickel barrier Intermediate lead bronze layer Steel Back</p>
	<p><b>SI/HP</b> Aluminum based material, strengthened by 2.5-3% silicon, for medium load engines or nodular cast iron crankshafts.</p> <p>Load Capacity: </p> <p>Anti Seizure: </p> <p>Wear Resistance: </p> <p>Conformability/Embedability: </p>	<p>Aluminum Bearing Alloy Aluminum alloy bonding layer Steel Back</p>		<p><b>XP (pMax Black™)</b> Unique tri-metal structure for race applications. Overlay features proprietary nano-scaled hardening process producing superior load capacity.</p> <p>Load Capacity: </p> <p>Anti Seizure: </p> <p>Wear Resistance: </p> <p>Conformability/Embedability: </p>	<p>XP Babbitt layer contains high percentage of copper Nickel barrier Intermediate lead bronze layer Steel Back</p>
	<p><b>SM</b> The strongest aluminum based material. The alloy is strengthened by the addition of manganese and chrome (Mn, Cr), for high load applications.</p> <p>Load Capacity: </p> <p>Anti Seizure: </p> <p>Wear Resistance: </p> <p>Conformability/Embedability: </p>	<p>Strengthened Aluminum Bearing Alloy Aluminum alloy bonding layer Steel Back</p>		<p><b>XPC (pMax Kote™)</b> The coating serves to improve XP bearing wear resistance under conditions of metal-to-metal contact. It also increases the resistance of tri-metal bearings to cavitation erosion.</p> <p>Load Capacity: </p> <p>Anti Seizure: </p> <p>Wear Resistance: </p> <p>Conformability/Embedability: </p>	<p>5 micron polymer coating XP Babbitt layer contains high percentage of copper Nickel barrier Intermediate lead bronze layer Steel Back</p>
	<p><b>CP/CA</b> Standard copper based material, equivalent to SAE-794, for medium load engines.</p> <p>Load Capacity: </p> <p>Anti Seizure: </p> <p>Wear Resistance: </p> <p>Conformability/Embedability: </p>	<p>Babbitt overlay Nickel barrier Intermediate lead bronze layer Steel Back</p>		<p><b>SP</b> Lead free material with sputter overlay (plated by Physical Vapor Deposition) for extreme loads.</p> <p>Load Capacity: </p> <p>Anti Seizure: </p> <p>Wear Resistance: </p> <p>Conformability/Embedability: </p>	<p>Sputter overlay Nickel barrier Intermediate lead free bronze layer Steel Back</p>
	<p><b>MC</b> Factory coated aluminum based material with a nano-composite polymer coating containing solid lubricants and ceramic additives, designed for superior service life and performance in modern engines.</p> <p>Load Capacity: </p> <p>Anti Seizure: </p> <p>Wear Resistance: </p> <p>Conformability/Embedability: </p>	<p>5-10 micron polymer coating Strengthened aluminum alloy Steel Back</p>		<p><b>SV</b> A lead free silver based overlay material containing solid lubricant additives distributed throughout the silver matrix. For extreme load engines. Can be used as a sputter replacement.</p> <p>Load Capacity: </p> <p>Anti Seizure: </p> <p>Wear Resistance: </p> <p>Conformability/Embedability: </p>	<p>Silver based overlay Intermediate lead free bronze layer Steel Back</p>
	<p><b>TFC</b> Strengthened steel back with ductile bronze to withstand high pressure. composed of strengthened Babbitt and coated with an extra thick polymer layer to provide low friction and anti-seizure properties.</p> <p>Load Capacity: </p> <p>Anti Seizure: </p> <p>Wear Resistance: </p> <p>Conformability/Embedability: </p>	<p>10 micron polymer XP Babbitt layer contains high percentage of copper Ductile Bronze Steel Back</p>		<p><b>GPC</b> Polymer coated lead free silver based overlay material. used for applications that require a bearing to withstand extreme loads, high pressure and metal-to-metal contact due to minimal oil film thickness.</p> <p>Load Capacity: </p> <p>Anti Seizure: </p> <p>Wear Resistance: </p> <p>Conformability/Embedability: </p>	<p>10 micron polymer coating Silver based overlay Intermediate lead free bronze with additional tin Steel Back</p>
